

ENCAPSULON VIDEO POWERED BY WREN®

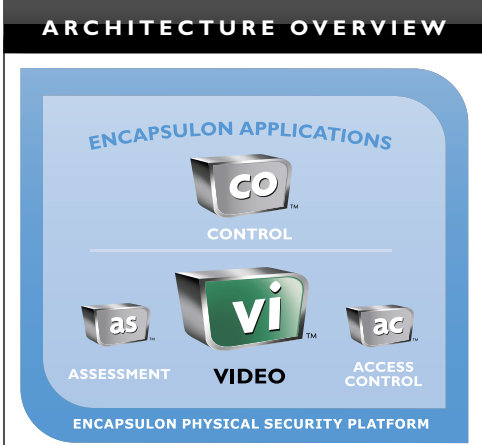

Focus on What's Important

Understanding what is happening in your organization is critical for good decision-making. Video is increasingly important for security, operations and every other functional area. Previously rendered nearly useless due to the time and complication of accessing the precise footage needed, video can now be easily and quickly accessed by users across the organization.

Welcome to Encapsulon Video, the video application of the Encapsulon Physical Security Platform that simplifies surveillance deployment in your organization. Architected for usability and long-term reliability, Encapsulon Video offers simplicity and cost-effectiveness unmatched by other surveillance solutions.

- » Our plug-and-play video solution includes out-of-the-box software and purpose-built appliances that integrate seamlessly with your existing IT network, requiring minimal IT resources and training.
- » A web-based application, Encapsulon Video delivers convenient user access without the hassle of IT-intensive management of software on individual computers. The software offers access to unlimited users, encouraging widespread use of video in areas beyond security such as operations, risk management, and customer service.
- » Architected for performance and scalability, Encapsulon Video accommodates existing analog and new IP cameras, making the most of legacy equipment, while also providing a platform for future technologies.

The result is a solution that delivers turnkey video management performance today, while enabling you to add functionality, other physical security components, and additional hardware over the long-term. Building your physical security program on the Encapsulon Platform ensures dependability, scalability and interoperability of the security systems you rely on most. Encapsulon Video lets you identify and use video as a critical source of information for better, more informed decision-making.

The diagram is titled 'ARCHITECTURE OVERVIEW' in a black bar at the top. Below this, a blue rounded rectangle contains the text 'ENCAPSULON APPLICATIONS' at the top. In the center, there are three 3D cube icons: 'co' (Control) at the top, 'as' (Assessment) on the left, 'vi' (Video) in the center, and 'ac' (Access Control) on the right. Below these icons are the labels 'ASSESSMENT', 'VIDEO', and 'ACCESS CONTROL'. At the bottom of the blue box, it says 'ENCAPSULON PHYSICAL SECURITY PLATFORM'.

Encapsulon integrates data from disparate security systems for easier, more effective business management.

- » Seamless integration of applications enables interoperability of physical security solutions.
- » Open architecture accommodates current and future systems for strong ROI.
- » Web-based interface allows for convenient access from any computer.
- » Applications offer consistent, user-friendly functionality.
- » Purpose-built appliances are easy to install and maintain, minimal IT expertise required.
- » Service-oriented architecture is fully scalable and the most efficient way to manage data.

Benefits of Encapsulon Video

Access and use video on your terms with Encapsulon Video. This web-based application provides comprehensive management of your video surveillance system, from custom set-up and configuration, to management of users, and distribution of video access to users on the network.

Usable » Instantly access recorded or live video. Mapping feature helps you find the video you need by clicking on camera icons arranged on a map or floorplan. This makes orientation easy, even for users who are not familiar with the building.

Scalable » Encapsulon Video accommodates growth. Video Recording Appliances (VRAs and VRA-Hs) capture and store video efficiently, and can be scaled to accommodate any number of locations or cameras.

Simple » Purpose-built appliances designed to manage video efficiently and run enterprise software enable plug-and-play integration, requiring minimal expertise in video or IT.

Informed » Encapsulon Control's Event Viewer module searches for and flags system-generated events for review, enabling immediate identification of potential video of significance.

Flexible » Encapsulon Video can manage analog and/or IP video and works with leading brands of cameras, making it a wise investment for maximizing legacy systems and accommodating future growth.

Encapsulon Video employs pre-configured purpose-built appliances to ensure hassle-free management of video. Plug-and-play functionality requires no technical expertise and places minimal burden on IT resources.

A Picture of Wren

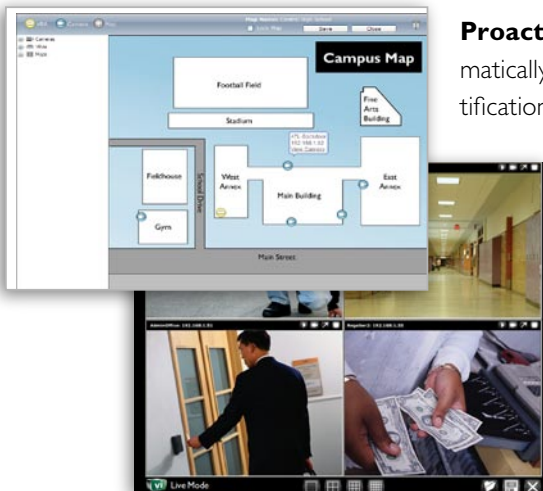

A leader in security for more than 25 years, Wren has a rich history in security, providing broad-based expertise to a range of customers from Fortune 100 enterprises to small independent school districts. Wren offers turnkey security solutions, from software and system applications, to equipment, accessories, and installation and training. Wren understands the convergence of IT and physical security and can help you implement a solution that meets your specific business requirements. To learn more about Wren, please visit wrensolutions.com.

The Power to See
Your BusinessSM

Proactive » The WatchDog feature automatically monitors and sends an email notification to assigned users when a system disruption occurs, allowing you to address issues immediately.

IT-friendly » Wren's distributed, web-based architecture accommodates multiple network environments for maximum flexibility and performance.
